

LoviFlex[®] GSE Terminations

LoviFlex[®] GSE terminations offer a reliable, sustainable and maintenance-free solution for the installation of PILC connections in medium voltage substations.

The installation-friendly construction guarantees a robust and safe termination. Due to the use of LoviSil[®] liquid silicone technology, the termination can be installed safely without oil.

- Lifespan extension of existing assets
- Maintenance-free: no refilling necessary
- Safe for the installer: no oil-heating

Robust, reliable and sustainable

The LoviFlex® termination is made of a strong housing made of ABS and silicone rubber. The termination is filled with LoviSil®, a liquid silicone that guarantees perfect electrical insulation.

LoviSil® migrates with the cable grease and thus prevents the paper cable from drying out. In addition, the LoviSil® in the termination is hardened after 2-3 weeks, making it unnecessary to refill afterwards.

Simple and safe installation

The use of LoviSil® makes the installation much safer and the installation time considerably shorter. Heating oil and waiting times for cooling are a thing of the past. The two-part construction ensures that the LoviFlex® termination can also be mounted in tight spaces with ease.

The connection and housing are realized in just a few steps. The flexible sleeve makes it easy for the joiner to size and the parts are fastened without bolts. After that, the termination can be filled immediately, without heating or waiting times.

Type test

The LoviFlex® GSE termination has been successfully tested according to HD 629 / EN 61442.

The best connections are made together

The Lovink Enertech brand is synonymous with intelligent, innovative and cost effective solutions, which we design, engineer and test from start to finish. With our own production facilities we supply reliable cable accessories that comply with all possible requirements, now and in the future. Besides that, our desire is to offer you additional support with specialised advice and guidance. So we are both contributing to reliable electricity systems.
