

NOTE: New outer shells LoviSil® M series

Installation benefits

More flexible material
Recycled ABS, lighter in weight: easier to handle and shapes better around the amalgamating tape

Calliper
- Joint-specific calliper stamped into the flap of the box (no extra tool required)

Less chance of sheath failure
- Additional ridge in the shell pushes the copper mesh wrap inwards

Gasket only in the lower shell
- Easier to check for the jointer

Better sealing
- No weld seam
- Shells overlap each other providing an improved seal

More stable
- 2 supports integrated in the lower shells
